Art Unit: 2136

R. Sydnor - 12/26/01

1. An access right setting apparatus which can set
access right information for limiting utilization of a resource with
5 respect to said resource whose utilization can be limited by setting
an access right, characterized by:

access request information acceptance means for
accepting access request information in which information for
requiring the access right setting to said resource is described;

10 access request information judgment means for judging a
content of said access request information accepted by said
access request information acceptance means; and

access request information setting means for setting the
content of said access request information judged by said access
15 request information judgment means as said access right
information.

2. An access right setting apparatus which can set
access right information for limiting utilization of a resource with
respect to said resource whose utilization can be limited by setting
an access right, characterized by:

access request information acquirement asking means
for asking for acquirement of access request information in which
information for requiring the access right setting to said resource
5 is described;

access request information acceptance means for
acquiring said access request information designated by said
access request information acquirement asking means;

5 access request information judgment means for judging
enable/disable of a content of said access request information
acquired by said access request information acceptance means;
and

0 access request information setting means for setting the
content of said access request information judged by said access
request information judgment means as said access right
information.

3. A manager terminal connected to an access right
setting apparatus which can set access right information for
5 limiting utilization of a resource with respect to said resource
whose utilization can be limited by setting an access right via a
network, characterized by:

access request information acceptance means for
accepting access request information in which information for
0 requiring the access right setting to said resource is described;

access request information judgment means for judging a
content of said access request information accepted by said
access request information acceptance means; and

access request information setting means for setting the
;5 content of said access request information judged by said access

request information judgment means as said access right
information, said manager terminal comprising:

- 5  access request information acquirement asking means
for asking for acquirement of the access request information in
which the information for requiring the access right setting to said
resource is described;

- 10 access request information judgment means for receiving
said access request information from said access right setting
apparatus, and judging enable/disable of the content of said
access request information; and

access request information automatic judgment means
for automatically performing the enable/disable judgment.

4. A manager terminal connected to an access right
- 15 setting apparatus which can set access right information for
limiting utilization of a resource with respect to said resource
whose utilization can be limited by setting an access right via a
network, characterized by:
- access request information acquirement asking means
- 20 for asking for acquirement of access request information in which
information for requiring the access right setting to said resource
is described;
- access request information acceptance means for
acquiring said access request information designated by said
- 25 access request information acquirement asking means;

5. (Amended) The access right setting apparatus according to claim 1, characterized by user identifier registration means for issuing an identifier for uniquely specifying a user, necessary for performing user authentication to make possible connection for the user who cannot connect to said access right setting apparatus for accessing said resource, and registering the identifier as a part of said access request information.

6. (Amended) The access right setting apparatus according to claim 1, characterized by access request information acceptance means which can accept said access request information designated by an identifier or classification of said resource,

not by an identifier for uniquely specifying said resource with respect to designation of said resource as an object of the access right setting described in said access request information.

7. (Amended) The manager terminal according to claim 3, characterized by access object resource selection means by which a manager can select said resource as an object of utilization from a plurality of resources, when said resource as an object of the access right setting described in said access request information is designated not by an identifier for uniquely specifying said resource, but by an identifier of classification of said resource with respect to designation of said resource as the object of the access right setting described in said access request information, and when there are a plurality of corresponding said resources.

8. (Amended) The manager terminal according to claim 3, characterized by access request information change means which can change the content described in said access request information received from said access right setting apparatus.
9. (Amended) The access right setting apparatus according to claim 1, characterized by an open resource information storage device which can store information open to an access originator of said resource among information of not an identifier for uniquely specifying said resource, but an identifier of classification of said resource with respect to designation of said resource as the object of the access right setting described in said access request information.
10. (Amended) The access right setting apparatus according to claim 1, characterized by display information preparation means which can convert the content described in said access request information to a visually and easily understandable natural language in order to accurately notify said manager of said access request information.

11. (Amended) The access right setting apparatus according to claim 1, characterized by access request information authentication means for authenticating said access request information in order to confirm that said access request information is not prepared by an illicit action represented by falsification or pretense.

12. (Amended) The access right setting apparatus according to claim 1, characterized by:

request information transfer means for a mobile terminal for transferring the content described in said access request information to a mobile terminal so that the content is grasped in a remote area; and

request information judgment means for the mobile terminal for performing the enable/disable judgment of said access request information from said mobile terminal.

13. The access right setting apparatus according to claim 12, characterized by object resource selection means for the mobile terminal for performing selection of the resource as said
15 access object performed by the access object resource selection means by which said manager can select said resource as the object of the utilization from said plurality of resources from said mobile terminal, when said resource as the object of the access
20 right setting described in said access request information is designated not by an identifier for uniquely specifying said resource, but by an identifier of classification of said resource with respect to designation of said resource as the object of the access right setting described in said access request information, and
25 when there are a plurality of corresponding said resources.

14. (Amended) The access right setting apparatus according to claim 12, characterized by request information change means for the mobile terminal for performing the change of the content described in said access request information from said mobile terminal.
